Grade 5 Math Terminology #1

Term	Definition
Factor	**One of two or more expressions that are multiplied together to get a product.**
Commutative Property of Multiplication	**When two numbers are multiplied, the product is the same regardless of the order of the factors.**
area	**The number of square units that covers a shape or figure**
Less than	**Is used to compare two numbers when the first number is smaller than the second number**
addend	**Any number being added**

Greater than	**Is used to compare two numbers when the first number is larger than the second number**
Commutative Property of Addition	**When two numbers are added, the sum is the same regardless of the order of the addends.**
Product	**The result of two numbers being multiplied together**
Hundredth	**One out of one hundred equal parts; the position of the second digit to the right of the decimal point**
Quotient	**The answer to a division problem**

Dividend	**The number that is divided by another number in a division operation.**
Bar model	**A visual model used to solve word problems in the place of guess and check.**
Estimate	**A close guess of the actual value, usually with some thought or calculation involved.**
Tenth	**One out of one ten equal parts; the position of the first digit to the right of the decimal point**
Order of Operation	**Is a rule used to clarify which procedures should be performed first in a given mathematical expression**

Difference	**The result when one number is subtracted from another**
Round	**A method of approximating a number to its nearest place value**
Divisor	**The quantity by which another quantity is to be divided**
centimeter	**A measure of length. There are 100 ---------- in a meter.**
Numerator	**The top part of a fraction**
Place value	**The value of where the digit is in the number**

Equation	**A number sentence with an equal sign. The amount on one side of the equal sign has the same value as the amount on the other side.**
Remainder	**The amount left over after division when one divisor does not divide the dividend exactly**
Decimal	**The expression of a fraction in the base of ten, using a _____ point to separate whole numbers from the fractional value.**
Sum	**The answer to an addition problem**

Math Terminology #2

Thousandth	**One out of one thousand equal parts: the position of the third digit to the right of the decimal point.**
Meter	**The basic unit of length (or distance) in the Metric System. The abbreviation is (m).**
Parentheses	**The symbols (and) used in grouping.**
Number line	**A line with numbers placed in their correct position.**
Associative Property of Multiplication	**When three or more numbers are multiplied, the product is the same regardless of the grouping of the factors. For instance, (2X3) X4 = 2 X (3 X 4)**

Associative Property of Addition	**When three or more numbers are added, the sum is the same regardless of the grouping of the addends. For example, ((2+3) +4 = 2 + (3+4)**
Expanded form	**A way to write a number that shows the sum of the values of each digit of a number. For example, 543 = 500 + 40 + 3.**
Millimeter	**A metric unit used to length. The abbreviation is (mm).**
Area model	**A pictorial way of representing multiplication. In the _____, the length and width of a rectangle represents factors, and the area of the rectangle represents their product**
Expression	**A mathematical phrase without an equal sign.**

Standard form	**The numerical version of a number where each number has a place value.**
Minuend	**The starting number in a subtraction problem.**
Subtrahend	**The number to be subtracted from another number**

Math Terminology #2

Unlike denominators	**Two or more fractions that do not have the same denominator.**
Simplify	**To express a fraction in simplest form**
Evaluate	**To substitute number values into an expression**

Proper fraction	**A fraction whose numerator is less than its denominator.**
Mixed number	**A number written as a whole number and a fraction.**
Simplest form	**When a fraction is expressed with the fewest number of pieces (also lowest term).**
Inequality	**A mathematical sentence that uses symbols such as < or > to compare two quantities.**
Equivalent fractions	**Different fractions that name the same number or amount.**
Whole numbers	**The set of numbers that includes zero and all of the natural numbers.**

Improper fraction	**A fraction in which the number in the numerator is greater than or equal to the number in the denominator.**
Denominator	**The bottom part of a fraction.**
Lowest terms	**A fraction expressed in the fewest number of pieces possible (also simplest form)**
