Name _____ Date _____

Math Terminology #3

attribute	A characteristic of an object such as color, shape, or size
decompose	To separate into basic elements
Metric system	A system of measuring based on the meter for length
Like denominators	Denominators in two or more fractions that are the same
algorithm	Set of steps used to solve a mathematical computation
reciprocal	Multiplicative inverse- 1 divided by that number
brackets	Extra forms of parentheses when one set of parentheses is not enough to indicate all the grouping
array	An orderly arrangement in rows and columns used in multiplication and division to show how multiplication can be shown as repeated addition and division can be shown as fair shares

Distributive property	Multiply a sum by multiplying each addend separately and then add the products
Benchmark fractions	Common fractions that you can judge other numbers against
Decimal point	A printed or written dot in a decimal number that divides the whole numbers from the tenths, hundredths, and smaller divisions of ten
braces	Extra forms of parentheses when one set of parentheses and one set of brackets is not enough to indicate all the grouping

compose	To put together basic elements
addend	Any number being added
Bar model	A visual model used to solve word problems in the place of guess and check
Coordinate system	A method of representing points in a space of given dimensions by coordinates

Base of a solid figure	Usually thought of as a face upon which a solid figure can sit
Corresponding terms	Terms that are in the same position in a sequence of numbers
Base of an exponent	The number being raised to a certain power in an exponent
axis	The vertical and horizontal lines that make up the quadrants of a coordinate plane
coordinates	The pairs of numbers which specify the position or location of a point
Coordinate plane	A plane formed by the intersection of a horizontal number line with a vertical number line
decimeter	One tenth of a meter
Cubic unit	A unit for measuring volume
